Description	
<p>Last updated: 2010-04-09 Status: CLOSITEM - Closed item Initiated: 2010-01-28 By: Eva Skytt, Linköping/CPK, Sweden Expert Network 2010-03-12 - Change recommended Board 2010-04-09 - Recommendation accepted</p>	
BACKGROUND	
<p>CPK ID 332</p>	
Problem	
<p>D06.9 (Carcinoma of cervix, unspecified) combined with LDC03 (Conisation of cervix uteri using diathermy or laser) in outpatient care is allocated to DRG364O (D&c, conization, for non-malignancy , short therapy) with the weight 0.1374 (Sweden 2010). If a polyp of cervix uteri (N84.1) is excised (LDB00) in the same session the case is allocated to DRG 360O (Vagina, cervix & vulva procedures , short therapy) with the weight 0,1104. Thus, the addition of a secondary procedure results in a DRG with lesser weight. This is undesirable because we have a risk for underreporting of procedures, which will lead to incorrect medical registers.</p>	
Analysis	
<p>The problem is caused by a hierarchy problem in the outpatient part of MDC 13.</p>	
Suggestion	
<p>The rule for DRG 360O with ORD 113D090 should be moved to below the rule for DRG 364O.</p>	
COMMENTS	
Expert Network 2010-03-12	
<p>The meeting recommended to accept the proposal that the rule for DRG 360O with ORD 113D090 should be moved to below the rule for DRG 364O.</p>	
CHANGES	
Technical change	
<p>The rule for DRG 360O with ORD 113D090 should be moved to below the rule for DRG 364O (currently ORD 113D100)</p>
